I am interested in applying for a research summer internship position at Oxford Brookes University. My CV is enclosed with this email. I am currently doing a dual degree course (M.Tech + B.Tech) in Electrical Engineering and minor in Computer Science in IIT Bombay. I am seeking to complement my current experience with a research internship in order to acquire the background necessary for a future career in scientific research.

The project description sounds very exciting, and it completely aligns with my areas of interest. I know Python, and I love to solve intricate mathematical problems. I am a quick learner and am seeking an opportunity where I can explore things and can make it work from scratch. I am extremely motivated and passionate about the projects that involves the application of Machine learning and image/object recognition.

Most of the ongoing projects in your research group is quite interesting specially the one where the researchers are trying to improve the video search by analysing the semantic content of media and labelling video clips for action recognition.

I believe that I would be able to contribute substantially to your research program. At the same time, this internship would provide me with the ideal opportunity to expand my research skills. I look forward to hearing from you.
